Exp No:10

Experiment to understand array function in Data science.

AIM:

Understand array function using Numpy library

PROGRAM:

```
import numpy as np
array=np.random.randint(1,100,9)
array
np.sqrt(array)
array.ndim
new_array=array.reshape(3,3)
new_array
new_array.ndim
new_array.ravel()
newm=new_array.reshape(3,3)
newm
newm[2,1:3]
newm[1:2,1:3]
new_array[0:3,0:0]
new_array[0:2,0:1]
new_array[0:3,0:1]
new_array[1:3]
```

OUTPUT:

```
array([43, 31, 27, 91, 86, 39, 27, 13, 77])
array([6.55743852, 5.56776436, 5.19615242, 9.53939201, 9.2736185 ,
       6.244998  , 5.19615242, 3.60555128, 8.77496439])
1
array([[43, 31, 27],
       [91, 86, 39],
       [27, 13, 77]])
2
array([43, 31, 27, 91, 86, 39, 27, 13, 77])
array([[43, 31, 27],
       [91, 86, 39],
       [27, 13, 77]])
array([13, 77])
array([[86, 39]])
```

```
array([], shape=(3, 0), dtype=int64)
array([[43],
       [91]])
array([[43],
       [91],
       [27]])
array([[91, 86, 39],
       [27, 13, 77]])
```

RESULT:

The experiment has been carried out successfully
